

PROJECT PROPOSAL: CUSTOM WEBSITE RENEWAL & SEO

Prepared For: Rini

Prepared By: Fahad Asghar

Date: June 19, 2026

Project Type: Custom Frontend Development & Platform Transition from Wix to Custom Coded

1. Executive Summary

The objective of this project is to completely overhaul your digital presence by transitioning your existing Wix website into a fully custom-programmed, high-performance web platform. While Wix provides a baseline for starting out, it introduces heavy code bloat, restrictive templates, and sub-optimal loading speeds that hold back your search engine rankings and user conversion rates.

By rebuilding the platform using modern, lightweight development technologies, we will eliminate these technical limitations. The design will shift from standard layouts to a bespoke, highly engaging digital experience featuring premium 3D elements that radiate trust and warmth, perfectly tailored for the healthcare staffing sector. The ultimate goal is to create a powerful working tool that provides the absolute shortest path between a visitor landing on the page and taking action, whether they are a healthcare professional registering for work or an institution submitting a staffing request.

2. Project Scope & Scope Refinement

To ensure a lean infrastructure, fast deployment, and maximum reliability, we have streamlined the architecture based on your explicit operational workflow. Rather than building heavy database user-portals or candidate dashboards that add maintenance overhead, the website will function as an advanced, high-conversion lead generation tool. All registrations and institutional requests will be captured securely through custom front-end interfaces and delivered instantly to your team's designated mailbox.

3. Core Features & Technical Specification

The platform will incorporate the following core functional modules and architectural features:

Category	Feature Included	Functional Detail
Healthcare Professional Registration	Direct-to-Email Registration Form	A clean, intuitive form capturing essential applicant details (Full Name, Contact Info, Profession/Specialization via dropdown) that routes data instantly to your mailbox.
Healthcare Professional Registration	Secure Resume/CV Attachment	An embedded file upload field allowing candidates to attach documents (PDF, DOCX) directly to their registration submission. Sent to your inbox as a secure email attachment.
Healthcare Institutions Portal	Staffing Request Form	A specialized B2B contact module allowing medical facilities, care homes, and clinics to quickly outline their personnel needs (Shift times, Urgency, Required specialization).
Communication & Engagement	Persistent WhatsApp Integration	A floating, low-threshold WhatsApp widget fixed to the screen layout to maintain immediate, direct conversational access for casual inquiries.
Design & UI/UX	Bespoke Design with 3D Aesthetics	A unique layout developed entirely from scratch (no rigid templates) that balances a trustworthy healthcare color scheme with modern 3D graphics and subtle micro-animations.

Category	Feature Included	Functional Detail
Design & UI/UX	No-Nonsense Anchor Navigation	A minimal, high-intent header menu designed to drive immediate conversions by smoothly scrolling the visitor down to the precise form they need.
Backend Infrastructure	Transactional Email Service Integration	Integration of a professional email delivery API to ensure 100% deliverability, preventing form submissions from getting delayed or marked as spam.
Backend Infrastructure	Invisible Anti-Spam Safeguards	Implementation of automated spam protection (Cloudflare Turnstile or reCAPTCHA v3) to keep automated bot submissions out of your business inbox without disrupting real users.
SEO & Performance	Technical SEO Engine Optimization	Rebuilding using lightning-fast, semantic custom code to achieve near-perfect performance scores, optimized mobile responsiveness, and clean indexable page architecture.
SEO & Performance	301 Redirect Mapping & Forwarding	Development of a redirection configuration mapping secondary domains and legacy Wix URLs to the new core structure to consolidate domain authority and protect your Google rankings.

4. The Complexities & Crucial Challenges ("The Hard

Parts")

To ensure complete transparency, there are two technical pillars in this custom development project that require highly meticulous execution:

- **Preserving and Consolidating Search Engine Authority (301 Redirect Strategy):**
Migrating a live platform away from Wix can severely damage your search visibility if handled incorrectly. Wix structures its internal URLs and sitemaps very differently than a custom platform. The complex part of this project involves performing an exhaustive audit of your active indexed pages and secondary domains, mapping out exact Server-Side 301 Redirects. This forces Google to transfer all your accumulated keyword authority into a single, dominant main domain instead of fragmenting your ranking power across separate sites.
- **Balancing Advanced Visuals (3D Elements) with Ultra-Fast Page Speed:**
Incorporating modern 3D graphic assets or interactive micro-animations is highly effective for standing out from competitors, but it drastically increases file sizes. If implemented carelessly, it will replicate the exact slowness we are trying to escape on Wix. The hard part will be optimizing these visual layouts through precise code split techniques, asset compression, and lazy loading, allowing us to deliver an eye-catching, premium design while keeping loading times down to milliseconds.

5. Project Timeline

The project is estimated to take approximately **18 Days** from start to completion.

6. Financial Proposal & Investment Options

As a returning client, this budget is structured to pass on a loyalty rate, minimizing your administrative software overhead while providing top-tier, custom engineering.

Project Component	Standard Market Value	Returning Client Loyalty Rate
TOTAL INVESTMENT		\$380

Payment Terms:
- 50% (\$190) Upfront payment upon proposal sign off.

- 50% (\$190) Payment on final delivery following approval and live domain deployment.

Payment will take place through a link sent via Remitly.
